Java SE 27 & JDK 27

Interface Closeable

All Superinterfaces:

AutoCloseable

All Known Subinterfaces:

AsynchronousByteChannel, AsynchronousChannel, ByteChannel, Channel, DirectoryStream<T>, GatheringByteChannel, ImageInputStream, ImageOutputStream, InterruptibleChannel, JavaFileManager, JMXConnector, ModuleReader, MulticastChannel, NetworkChannel, ReadableByteChannel, RMIConnection, ScatteringByteChannel, SecureDirectoryStream<T>, SeekableByteChannel, StandardJavaFileManager, WatchService, WritableByteChannel

All Known Implementing Classes:

AbstractInterruptibleChannel, AbstractSelectableChannel, AbstractSelector, AsynchronousFileChannel, AsynchronousServerSocketChannel, AsynchronousSocketChannel, AudioInputStream, BufferedInputStream, BufferedOutputStream, BufferedReader, BufferedWriter, ByteArrayInputStream, ByteArrayOutputStream, CharArrayReader, CharArrayWriter, CheckedInputStream, CheckedOutputStream, CipherInputStream, CipherOutputStream, DatagramChannel, DatagramSocket, DataInputStream, DataOutputStream, DeflaterInputStream, DeflaterOutputStream, DigestInputStream, DigestOutputStream, FileCacheImageInputStream, FileCacheImageOutputStream, FileChannel, FileImageInputStream, FileImageOutputStream, FileInputStream, FileOutputStream, FileReader, FileSystem, FileWriter, FilterInputStream, FilterOutputStream, FilterReader, FilterWriter, Formatter, ForwardingJavaFileManager, GZIPInputStream, GZIPOutputStream, ImageInputStreamImpl, ImageOutputStreamImpl, InflaterInputStream, InflaterOutputStream, InputStream, InputStreamReader, JarFile, JarInputStream, JarOutputStream, LineNumberInputStream, LineNumberReader, LogStream, MemoryCacheImageInputStream, MemoryCacheImageOutputStream, MulticastSocket, ObjectInputStream, ObjectOutputStream, OutputStream, OutputStreamWriter, Pipe.SinkChannel, Pipe.SourceChannel, PipedInputStream, PipedOutputStream, PipedReader, PipedWriter, PrintStream, PrintWriter, Process, ProgressMonitorInputStream, PushbackInputStream, PushbackReader, RandomAccessFile, Reader, Recording, RecordingFile, RMIConnectionImpl, RMIConnectionImpl_Stub, RMIConnector, RMIJRMPServerImpl, RMIServerImpl, Scanner, SctpChannel, SctpMultiChannel, SctpServerChannel, SelectableChannel, Selector, SequenceInputStream, ServerSocket, ServerSocketChannel, Socket,

SocketChannel, SSLServerSocket, SSLSocket, StringBufferInputStream, StringReader, StringWriter, URLClassLoader, Writer, ZipFile, ZipInputStream, ZipOutputStream

---

```
public interface Closeable
extends AutoCloseable
```

A `Closeable` is a source or destination of data that can be closed. The close method is invoked to release resources that the object is holding (such as open files).

Since:

1.5

Method Summary

All Methods	Instance Methods	

Modifier and Type	Method	Description
`void`	`close()`	Closes this stream and releases any system resources associated with it.

Method Details

close

```
void close()
    throws IOException
```

Closes this stream and releases any system resources associated with it. If the stream is already closed then invoking this method has no effect.

As noted in `AutoCloseable.close()`, cases where the close may fail require careful attention. It is strongly advised to relinquish the underlying resources and to internally *mark* the `Closeable` as closed, prior to throwing the `IOException`.

Specified by:

`close` in interface `AutoCloseable`

Throws:

`IOException` - if an I/O error occurs

Report a bug or suggest an enhancement
