Java SE 27 & JDK 27

Class FileNotFoundException

java.lang.Object
  java.lang.Throwable
    java.lang.Exception
      java.io.IOException
        java.io.FileNotFoundException

All Implemented Interfaces:

Serializable

```
public class FileNotFoundException
extends IOException
```

Signals that an attempt to open the file denoted by a specified pathname has failed.

This exception will be thrown by the `FileInputStream`, `FileOutputStream`, and `RandomAccessFile` constructors when a file with the specified pathname does not exist. It will also be thrown by these constructors if the file does exist but for some reason is inaccessible, for example when an attempt is made to open a read-only file for writing.

Since:

1.0

Constructor Summary

Constructors

Constructor	Description
`FileNotFoundException()`	Constructs a `FileNotFoundException` with `null` as its error detail message.
`FileNotFoundException(String s)`	Constructs a `FileNotFoundException` with the specified detail message.

Method Summary

Methods declared in class Throwable

addSuppressed, fillInStackTrace, getCause, getLocalizedMessage, getMessage, getStackTrace, getSuppressed, initCause, printStackTrace, printStackTrace, printStackTrace, setStackTrace, toString

Methods declared in class Object

clone, equals, finalize, getClass, hashCode, notify, notifyAll, wait, wait, wait

Constructor Details

FileNotFoundException

```
public FileNotFoundException()
```

Constructs a `FileNotFoundException` with `null` as its error detail message.

FileNotFoundException

```
public FileNotFoundException(String s)
```

Constructs a `FileNotFoundException` with the specified detail message. The string `s` can be retrieved later by the `Throwable.getMessage()` method of class `java.lang.Throwable`.

Parameters:

`s` - the detail message.
