Java SE 27 & JDK 27

Class InstantiationException

java.lang.Object
  java.lang.Throwable
    java.lang.Exception
      java.lang.ReflectiveOperationException
        java.lang.InstantiationException

All Implemented Interfaces:

`Serializable`

```
public class InstantiationException
extends ReflectiveOperationException
```

Thrown when an application tries to create an instance of a class using the `newInstance` method in class `Class`, but the specified class object cannot be instantiated. The instantiation can fail for a variety of reasons including but not limited to:

- the class object represents an abstract class, an interface, an array class, a primitive type, or `void`
- the class has no nullary constructor

Since:

1.0

See Also:

`Class.newInstance()`, Serialized Form

Constructor Summary

Constructors

Constructor	Description
`InstantiationException()`	Constructs an `InstantiationException` with no detail message.
`InstantiationException(String s)`	Constructs an `InstantiationException` with the specified detail message.

Method Summary

Methods declared in class Throwable

addSuppressed, fillInStackTrace, getCause, getLocalizedMessage, getMessage, getStackTrace, getSuppressed, initCause, printStackTrace, printStackTrace, printStackTrace, setStackTrace, toString

Methods declared in class Object

clone, equals, finalize, getClass, hashCode, notify, notifyAll, wait, wait, wait

Constructor Details
