Java SE 27 & JDK 27

Class InterruptedException

java.lang.Object
  java.lang.Throwable
    java.lang.Exception
      java.lang.InterruptedException

All Implemented Interfaces:

Serializable

```
public class InterruptedException
extends Exception
```

Thrown when a thread executing a blocking method is interrupted. `Thread.sleep`, `Object.wait` and many other blocking methods throw this exception if interrupted.

Blocking methods that throw `InterruptedException` clear the thread's interrupted status before throwing the exception. Code that catches `InterruptedException` should rethrow the exception, or restore the current thread's interrupted status, with `Thread.currentThread().interrupt()`, before continuing normally or handling it by throwing another type of exception.

Since:

1.0

Constructor Summary

Constructors

Constructor	Description
`InterruptedException()`	Constructs an `InterruptedException` with no detail message.
`InterruptedException(String s)`	Constructs an `InterruptedException` with the specified detail message.

Method Summary

Methods declared in class Throwable

addSuppressed, fillInStackTrace, getCause, getLocalizedMessage, getMessage, getStackTrace, getSuppressed, initCause, printStackTrace, printStackTrace, printStackTrace, setStackTrace, toString

Methods declared in class Object

clone, equals, finalize, getClass, hashCode, notify, notifyAll, wait, wait, wait

Constructor Details

InterruptedException

```
public InterruptedException()
```

Constructs an `InterruptedException` with no detail message.

InterruptedException

```
public InterruptedException(String s)
```

Constructs an `InterruptedException` with the specified detail message.

Parameters:

`s` - the detail message.
