Java SE 27 & JDK 27

Interface Consumer<T>

Type Parameters:

T - the type of the input to the operation

All Known Subinterfaces:

ClassBuilder, ClassFileBuilder<E,B>, CodeBuilder, CodeBuilder.BlockCodeBuilder, FieldBuilder, MethodBuilder, Stream.Builder<T>

Functional Interface:

This is a functional interface and can therefore be used as the assignment target for a lambda expression or method reference.

```
@FunctionalInterface
public interface Consumer<T>
```

Represents an operation that accepts a single input argument and returns no result. Unlike most other functional interfaces, `Consumer` is expected to operate via side-effects.

This is a functional interface whose functional method is `accept(Object)`.

Since:

1.8

Method Summary

All Methods	Instance Methods	
Modifier and Type	**Method**	**Description**
`void`	**`accept`**`(T t)`	Performs this operation on the given argument.
`default Consumer<T>`	**`andThen`**`(Consumer<? super T> after)`	Returns a composed `Consumer` that performs, in sequence, this operation followed by the `after` operation.

Method Details

accept

```
void accept(T t)
```

Performs this operation on the given argument.

Parameters:

t - the input argument

andThen

```
default Consumer<T> andThen(Consumer<? super T> after)
```

Returns a composed `Consumer` that performs, in sequence, this operation followed by the `after` operation. If performing either operation throws an exception, it is relayed to the caller of the composed operation. If performing this operation throws an exception, the `after` operation will not be performed.

Parameters:

`after` - the operation to perform after this operation

Returns:

a composed `Consumer` that performs in sequence this operation followed by the `after` operation

Throws:

`NullPointerException` - if `after` is null
