java.util.function

Interface Consumer<T>

Type Parameters:

`T - the type of the input to the operation`

All Known Subinterfaces:

`Stream.Builder`<T>

Functional Interface:

`This is a functional interface and can therefore be used as the assignment target for a lambda expression or method reference.`

```
@FunctionalInterface
public interface Consumer<T>
```

Represents an operation that accepts a single input argument and returns no result. Unlike most other functional interfaces, `Consumer` is expected to operate via side-effects.

This is a functional interface whose functional method is `accept(Object)`.

Since:

`1.8`

Method Summary

Abstract Methods | **Default Methods**

Modifier and Type	Method	Description
void	**accept**(T t)	

		Performs this operation on the given argument.
default Consumer<T>	andThen(Consumer<? super T> after)	Returns a composed Consumer that performs, in sequence, this operation followed by the after operation.

Method Detail

accept

```
void accept(T t)
```

Performs this operation on the given argument.

Parameters:

`t - the input argument`

andThen

```
default Consumer<T> andThen(Consumer<? super T> after)
```

Returns a composed `Consumer` that performs, in sequence, this operation followed by the `after` operation. If performing either operation throws an exception, it is relayed to the caller of the composed operation. If performing this operation throws an exception, the `after` operation will not be performed.

Parameters:

`after - the operation to perform after this operation`

Returns:

`a composed Consumer that performs in sequence this operation followed by the after operation`

Throws:

```
NullPointerException - if after is null
```
