Java SE 27 & JDK 27

Class FileReader

java.lang.Object
    java.io.Reader
        java.io.InputStreamReader
            java.io.FileReader

All Implemented Interfaces:

Closeable, AutoCloseable, Readable

```
public class FileReader
extends InputStreamReader
```

Reads text from character files using a default buffer size. Decoding from bytes to characters uses either a specified charset or the default charset.

The `FileReader` is meant for reading streams of characters. For reading streams of raw bytes, consider using a `FileInputStream`.

Since:

1.1

See Also:

`InputStreamReader`, `FileInputStream`, `Charset.defaultCharset()`

Field Summary

Fields declared in class Reader

`lock`

Constructor Summary

Constructors

Constructor	Description
FileReader(File file)	Creates a new FileReader, given the File to read, using the default charset.
FileReader(FileDescriptor fd)	Creates a new FileReader, given the FileDescriptor to read, using the default charset.
FileReader(File file, Charset charset)	Creates a new FileReader, given the File to read and the charset.

FileReader(String fileName)	Creates a new FileReader, given the name of the file to read, using the default charset.
FileReader(String fileName, Charset charset)	Creates a new FileReader, given the name of the file to read and the charset.

Method Summary

Methods declared in class InputStreamReader

close, getEncoding, read, read, ready

Methods declared in class Reader

mark, markSupported, nullReader, of, read, read, readAllAsString, readAllLines, reset, skip, transferTo

Methods declared in class Object

clone, equals, finalize, getClass, hashCode, notify, notifyAll, toString, wait, wait, wait

Constructor Details

FileReader

```
public FileReader(String fileName)
           throws FileNotFoundException
```

Creates a new FileReader, given the name of the file to read, using the default charset.

Parameters:

fileName - the name of the file to read

Throws:

FileNotFoundException - if the named file does not exist, is a directory rather than a regular file, or for some other reason cannot be opened for reading.

See Also:

Charset.defaultCharset()

FileReader

```
public FileReader(File file)
           throws FileNotFoundException
```

Creates a new `FileReader`, given the `File` to read, using the default charset.

Parameters:

`file` - the `File` to read

Throws:

`FileNotFoundException` - if the file does not exist, is a directory rather than a regular file, or for some other reason cannot be opened for reading.

See Also:

`Charset.defaultCharset()`

FileReader

```
public FileReader(FileDescriptor fd)
```

Creates a new `FileReader`, given the `FileDescriptor` to read, using the default charset.

Parameters:

`fd` - the `FileDescriptor` to read

See Also:

`Charset.defaultCharset()`

FileReader

```
public FileReader(String fileName,
                  Charset charset)
           throws IOException
```

Creates a new `FileReader`, given the name of the file to read and the charset.

Parameters:

`fileName` - the name of the file to read

`charset` - the charset

Throws:

`IOException` - if the named file does not exist, is a directory rather than a regular file, or for some other reason cannot be opened for reading.

Since:

11

FileReader

```
public FileReader(File file,
                  Charset charset)
           throws IOException
```

Creates a new `FileReader`, given the `File` to read and the charset.

Parameters:

`file` - the `File` to read

`charset` - the charset

Throws:

`IOException` - if the file does not exist, is a directory rather than a regular file, or for some other reason cannot be opened for reading.

Since:

11
