Java SE 27 & JDK 27

Class InvalidClassException

java.lang.Object
  java.lang.Throwable
    java.lang.Exception
      java.io.IOException
        java.io.ObjectStreamException
          java.io.InvalidClassException

All Implemented Interfaces:

Serializable

```
public class InvalidClassException
extends ObjectStreamException
```

Thrown when the Serialization runtime detects one of the following problems with a Class.

- The serial version of the class does not match that of the class descriptor read from the stream
- The class contains unknown datatypes
- The class does not have an accessible no-arg constructor
- The ObjectStreamClass of an enum constant does not represent an enum type
- Other conditions given in the *Java Object Serialization Specification*

Since:

1.1

Serialized Form

Field Summary

Fields

Modifier and Type	Field	Description
String	**classname**	Name of the invalid class.

Constructor Summary

Constructors

Constructor	Description
InvalidClassException(String reason)	Report an InvalidClassException for the reason specified.

InvalidClassException(String cname, String reason)	Constructs an InvalidClassException object.
InvalidClassException(String cname, String reason, Throwable cause)	Report an InvalidClassException for the reason and cause specified.
InvalidClassException(String reason, Throwable cause)	Report an InvalidClassException for the reason and cause specified.

Method Summary

All Methods | Instance Methods

Modifier and Type	Method	Description
String	**getMessage**()	Produce the message and include the classname, if present.

Methods declared in class Throwable

addSuppressed, fillInStackTrace, getCause, getLocalizedMessage, getStackTrace, getSuppressed, initCause, printStackTrace, printStackTrace, printStackTrace, setStackTrace, toString

Methods declared in class Object

clone, equals, finalize, getClass, hashCode, notify, notifyAll, wait, wait, wait

Field Details

classname

```
public String classname
```

Name of the invalid class.

Constructor Details

InvalidClassException

```
public InvalidClassException(String reason)
```

Report an InvalidClassException for the reason specified.

Parameters:

`reason` - String describing the reason for the exception.

InvalidClassException

```
public InvalidClassException(String cname,
                             String reason)
```

Constructs an InvalidClassException object.

Parameters:

`cname` - a String naming the invalid class.

`reason` - a String describing the reason for the exception.

InvalidClassException

```
public InvalidClassException(String reason,
                             Throwable cause)
```

Report an InvalidClassException for the reason and cause specified.

Parameters:

`reason` - String describing the reason for the exception.

`cause` - the cause

Since:

19

InvalidClassException

```
public InvalidClassException(String cname,
                             String reason,
                             Throwable cause)
```

Report an InvalidClassException for the reason and cause specified.

Parameters:

`cname` - a String naming the invalid class.

`reason` - String describing the reason for the exception.

`cause` - the cause

Since:

19

Method Details

getMessage

```
public String getMessage()
```

Produce the message and include the classname, if present.

Overrides:

`getMessage` in class `Throwable`

Returns:

the detail message string of this `Throwable` instance (which may be `null`).
