Interface ObjectInputValidation

`public interface` **`ObjectInputValidation`**

Callback interface to allow validation of objects within a graph. Allows an object to be called when a complete graph of objects has been deserialized.

Since:

1.1

See Also:

`ObjectInputStream`, `ObjectInputStream.registerValidation(java.io.ObjectInputValidation, int)`

Method Summary

All Methods | Instance Methods

Modifier and Type	Method	Description
`void`	**`validateObject`**`()`	Validates the object.

Method Details

validateObject

```
void validateObject()
             throws InvalidObjectException
```

Validates the object.

Throws:

`InvalidObjectException` - If the object cannot validate itself.
