Java SE 27 & JDK 27

Class SerializablePermission

java.lang.Object
    java.security.Permission
        java.security.BasicPermission
            java.io.SerializablePermission

All Implemented Interfaces:

Serializable, Guard

```
@Deprecated(since="25",
            forRemoval=true)
public final class SerializablePermission
extends BasicPermission
```

Deprecated, for removal: This API element is subject to removal in a future version.
This permission cannot be used for controlling access to resources as the Security Manager is no longer supported.

This class is for Serializable permissions. A SerializablePermission contains a name (also referred to as a "target name") but no actions list; you either have the named permission or you don't.

Since:

1.2

See Also:

BasicPermission, Permission, Permissions, PermissionCollection, Serialized Form

Constructor Summary

Constructors

Constructor	Description
SerializablePermission(String name)	**Deprecated, for removal: This API element is subject to removal in a future version.** Creates a new SerializablePermission with the specified name.
SerializablePermission(String name, String actions)	**Deprecated, for removal: This API element is subject to removal in a future version.**

	Creates a new SerializablePermission object with the specified name.

Method Summary

Methods declared in class BasicPermission

`equals`, `getActions`, `hashCode`, `implies`, `newPermissionCollection`

Methods declared in class Permission

`checkGuard`, `getName`, `toString`

Methods declared in class Object

`clone`, `finalize`, `getClass`, `notify`, `notifyAll`, `wait`, `wait`, `wait`

Constructor Details

SerializablePermission

```
public SerializablePermission(String name)
```

Deprecated, for removal: This API element is subject to removal in a future version.

Creates a new SerializablePermission with the specified name. The name is the symbolic name of the SerializablePermission, such as "enableSubstitution", etc.

Parameters:

`name` - the name of the SerializablePermission.

Throws:

`NullPointerException` - if `name` is `null`.

`IllegalArgumentException` - if `name` is empty.

SerializablePermission

```
public SerializablePermission(String name,
                              String actions)
```

Deprecated, for removal: This API element is subject to removal in a future version.

Creates a new SerializablePermission object with the specified name. The name is the symbolic name of the SerializablePermission, and the actions String is currently unused and should be null.

Parameters:

`name` - the name of the SerializablePermission.

`actions` - currently unused and must be set to null

Throws:

`NullPointerException` - if `name` is `null`.

`IllegalArgumentException` - if `name` is empty.
