Java SE 27 & JDK 27

Interface Thread.UncaughtExceptionHandler

All Known Implementing Classes:

ThreadGroup

Enclosing class:

Thread

Functional Interface:

This is a functional interface and can therefore be used as the assignment target for a lambda expression or method reference.

```
@FunctionalInterface
public static interface Thread.UncaughtExceptionHandler
```

Interface for handlers invoked when a `Thread` abruptly terminates due to an uncaught exception.

When a thread is about to terminate due to an uncaught exception the Java Virtual Machine will query the thread for its `UncaughtExceptionHandler` using `Thread.getUncaughtExceptionHandler()` and will invoke the handler's `uncaughtException` method, passing the thread and the exception as arguments. If a thread has not had its `UncaughtExceptionHandler` explicitly set, then its `ThreadGroup` object acts as its `UncaughtExceptionHandler`. If the `ThreadGroup` object has no special requirements for dealing with the exception, it can forward the invocation to the default uncaught exception handler.

Since:

1.5

See Also:

`Thread.setDefaultUncaughtExceptionHandler(Thread.UncaughtExceptionHandler)`, `Thread.setUncaughtExceptionHandler(Thread.UncaughtExceptionHandler)`, `ThreadGroup.uncaughtException(Thread, Throwable)`

Method Summary

Modifier and Type	Method	Description
void	**uncaughtException**(Thread t, Throwable e)	Method invoked when the given thread terminates due to the given uncaught exception.

Method Details

uncaughtException

```
void uncaughtException(Thread t,
                       Throwable e)
```

Method invoked when the given thread terminates due to the given uncaught exception.

Any exception thrown by this method will be ignored by the Java Virtual Machine.

Parameters:

t - the thread

e - the exception
