Java SE 27 & JDK 27

Class ClassDefinition

java.lang.Object
    java.lang.instrument.ClassDefinition

```
public final class ClassDefinition
extends Object
```

This class serves as a parameter block to the `Instrumentation.redefineClasses` method. Serves to bind the `Class` that needs redefining together with the new class file bytes.

Since:

1.5

See Also:

`Instrumentation.redefineClasses(ClassDefinition...)`

Constructor Summary

Constructors

Constructor	Description
`ClassDefinition(Class<? > theClass, byte[] theClassFile)`	Creates a new `ClassDefinition` binding using the supplied class and class file bytes.

Method Summary

All Methods | **Instance Methods**

Modifier and Type	Method	Description
`Class<?>`	`getDefinitionClass()`	Returns the class.
`byte[]`	`getDefinitionClassFile()`	Returns the array of bytes that contains the new class file.

Methods declared in class Object

Constructor Details

ClassDefinition

```
public ClassDefinition(Class<?> theClass,
                       byte[] theClassFile)
```

Creates a new `ClassDefinition` binding using the supplied class and class file bytes. Does not copy the supplied buffer, just captures a reference to it.

Parameters:

`theClass` - the `Class` that needs redefining

`theClassFile` - the new class file bytes

Throws:

`NullPointerException` - if the supplied class or array is `null`.

Method Details

getDefinitionClass

```
public Class<?> getDefinitionClass()
```

Returns the class.

Returns:

the `Class` object referred to.

getDefinitionClassFile

```
public byte[] getDefinitionClassFile()
```

Returns the array of bytes that contains the new class file.

Returns:

the class file bytes.
