# Class WrongMethodTypeException

java.lang.Object
  java.lang.Throwable
    java.lang.Exception
      java.lang.RuntimeException
        java.lang.invoke.WrongMethodTypeException

**All Implemented Interfaces:**

Serializable

---

```
public class WrongMethodTypeException
extends RuntimeException
```

Thrown to indicate that code has attempted to call a method handle via the wrong method type. As with the bytecode representation of normal Java method calls, method handle calls are strongly typed to a specific type descriptor associated with a call site.

This exception may also be thrown when two method handles are composed, and the system detects that their types cannot be matched up correctly. This amounts to an early evaluation of the type mismatch, at method handle construction time, instead of when the mismatched method handle is called.

**Since:**

1.7

**See Also:**

Serialized Form

## *Constructor Summary*

**Constructors**

| Constructor | Description |
|---|---|
| `WrongMethodTypeException()` | Constructs a `WrongMethodTypeException` with no detail message. |
| `WrongMethodTypeException(String s)` | Constructs a `WrongMethodTypeException` with the specified detail message. |

## *Method Summary*

### Methods declared in class Throwable

addSuppressed, fillInStackTrace, getCause, getLocalizedMessage, getMessage, getStackTrace, getSuppressed, initCause, printStackTrace, printStackTrace, printStackTrace, setStackTrace, toString

### Methods declared in class Object

clone, equals, finalize, getClass, hashCode, notify, notifyAll, wait, wait, wait

## *Constructor Details*

### WrongMethodTypeException

```
public WrongMethodTypeException()
```

Constructs a `WrongMethodTypeException` with no detail message.

### WrongMethodTypeException

```
public WrongMethodTypeException(String s)
```

Constructs a `WrongMethodTypeException` with the specified detail message.

**Parameters:**

`s` - the detail message.
