Java SE 27 & JDK 27

Interface PlatformManagedObject

All Known Subinterfaces:

BufferPoolMXBean, ClassLoadingMXBean, CompilationMXBean, FlightRecorderMXBean, GarbageCollectorMXBean, GarbageCollectorMXBean, HotSpotAOTCacheMXBean, HotSpotDiagnosticMXBean, MemoryManagerMXBean, MemoryMXBean, MemoryPoolMXBean, OperatingSystemMXBean, OperatingSystemMXBean, PlatformLoggingMXBean, RuntimeMXBean, ThreadMXBean, ThreadMXBean, UnixOperatingSystemMXBean, VirtualThreadSchedulerMXBean

---

`public interface PlatformManagedObject`

A platform managed object is a JMX MXBean for monitoring and managing a component in the Java platform. Each platform managed object has a unique object name for the platform MBeanServer access. All platform MXBeans will implement this interface.

Note: The platform MXBean interfaces (i.e. all subinterfaces of `PlatformManagedObject`) are implemented by the Java platform only. New methods may be added in these interfaces in future Java SE releases. In addition, this `PlatformManagedObject` interface is only intended for the management interfaces for the platform to extend but not for applications.

Since:

1.7
