Java SE 27 & JDK 27

Interface AnnotatedTypeVariable

All Superinterfaces:

AnnotatedElement, AnnotatedType

---

public interface **AnnotatedTypeVariable**
extends AnnotatedType

AnnotatedTypeVariable represents the potentially annotated use of a type variable, whose declaration may have bounds which themselves represent annotated uses of types.

See *Java Language Specification*:

4.4 Type Variables

Since:

1.8

Method Summary

All Methods | Instance Methods

Modifier and Type	Method	Description
AnnotatedType[]	**getAnnotatedBounds**()	Returns the potentially annotated bounds of this type variable.
AnnotatedType	**getAnnotatedOwnerType**()	Returns the potentially annotated type that this type is a member of, if this type represents a nested type.

Methods declared in interface AnnotatedElement

getAnnotationsByType, getDeclaredAnnotation, getDeclaredAnnotationsByType, isAnnotationPresent

Methods declared in interface AnnotatedType

`getAnnotation`, `getAnnotations`, `getDeclaredAnnotations`, `getType`

Method Details

getAnnotatedBounds

`AnnotatedType[] getAnnotatedBounds()`

Returns the potentially annotated bounds of this type variable. If no bound is explicitly declared, the bound is unannotated `Object`.

Returns:

the potentially annotated bounds of this type variable

See Also:

`TypeVariable.getBounds()`

getAnnotatedOwnerType

`AnnotatedType getAnnotatedOwnerType()`

Returns the potentially annotated type that this type is a member of, if this type represents a nested type. For example, if this type is `@TA O<T>.I<S>`, return a representation of `@TA O<T>`.

Returns `null` for an `AnnotatedType` that is an instance of `AnnotatedTypeVariable`.

Specified by:

`getAnnotatedOwnerType` in interface `AnnotatedType`

Returns:

`null`

Since:

9
