Java SE 27 & JDK 27

Class AbstractSelectionKey

java.lang.Object
    java.nio.channels.SelectionKey
        java.nio.channels.spi.AbstractSelectionKey

```
public abstract class AbstractSelectionKey
extends SelectionKey
```

Base implementation class for selection keys.

This class tracks the validity of the key and implements cancellation.

Since:

1.4

Field Summary

Fields declared in class SelectionKey

`OP_ACCEPT`, `OP_CONNECT`, `OP_READ`, `OP_WRITE`

Constructor Summary

Constructors

Modifier	Constructor	Description
protected	`AbstractSelectionKey()`	Initializes a new instance of this class.

Method Summary

All Methods | **Instance Methods**

Modifier and Type	Method	Description
final void	`cancel()`	Cancels this key.
final boolean	`isValid()`	Tells whether or not this key is valid.

Methods declared in class SelectionKey

`attach`, `attachment`, `channel`, `interestOps`, `interestOps`, `interestOpsAnd`, `interestOpsOr`, `isAcceptable`, `isConnectable`, `isReadable`, `isWritable`, `readyOps`, `selector`

Methods declared in class Object

`clone`, `equals`, `finalize`, `getClass`, `hashCode`, `notify`, `notifyAll`, `toString`, `wait`, `wait`, `wait`

Constructor Details

AbstractSelectionKey

```
protected AbstractSelectionKey()
```

Initializes a new instance of this class.

Method Details

isValid

```
public final boolean isValid()
```

Description copied from class: `SelectionKey`

Tells whether or not this key is valid.

A key is valid upon creation and remains so until it is cancelled, its channel is closed, or its selector is closed.

Specified by:

`isValid` in class `SelectionKey`

Returns:

`true` if, and only if, this key is valid

cancel

```
public final void cancel()
```

Cancels this key.

If this key has not yet been cancelled then it is added to its selector's cancelled-key set while synchronized on that set.

Specified by:

`cancel` in class `SelectionKey`
