Java SE 27 & JDK 27

Interface DirectoryStream.Filter<T>

Type Parameters:

T - the type of the directory entry

Enclosing interface:

`DirectoryStream<T>`

Functional Interface:

This is a functional interface and can therefore be used as the assignment target for a lambda expression or method reference.

```
@FunctionalInterface
public static interface DirectoryStream.Filter<T>
```

An interface that is implemented by objects that decide if a directory entry should be accepted or filtered. A `Filter` is passed as the parameter to the `Files.newDirectoryStream(Path,DirectoryStream.Filter)` method when opening a directory to iterate over the entries in the directory.

Since:

1.7

Method Summary

All Methods	Instance Methods	

Modifier and Type	Method	Description
boolean	**accept**(T entry)	Decides if the given directory entry should be accepted or filtered.

Method Details

accept

```
boolean accept(T entry)
        throws IOException
```

Decides if the given directory entry should be accepted or filtered.

Parameters:

`entry` - the directory entry to be tested

Returns:

`true` if the directory entry should be accepted

Throws:

`IOException` - If an I/O error occurs
