Java SE 27 & JDK 27

Enum Class FileVisitResult

java.lang.Object
  java.lang.Enum<FileVisitResult>
    java.nio.file.FileVisitResult

All Implemented Interfaces:

Serializable, Comparable<FileVisitResult>, Constable

```
public enum FileVisitResult
extends Enum<FileVisitResult>
```

The result type of a FileVisitor.

Since:

1.7

See Also:

Files.walkFileTree(Path, Set, int, FileVisitor)

Nested Class Summary

Nested classes/interfaces declared in class Enum
Enum.EnumDesc<E>

Enum Constant Summary

Enum Constants

Enum Constant	Description
CONTINUE	Continue.
SKIP_SIBLINGS	Continue without visiting the *siblings* of this file or directory.
SKIP_SUBTREE	Continue without visiting the entries in this directory.
TERMINATE	Terminate.

Method Summary

All Methods | **Static Methods**

Modifier and Type	Method	Description

static FileVisitResult	**valueOf**(String name)	Returns the enum constant of this class with the specified name.
static FileVisitResult[]	**values**()	Returns an array containing the constants of this enum class, in the order they are declared.

Methods declared in class Enum

clone, compareTo, describeConstable, equals, finalize, getDeclaringClass, hashCode, name, ordinal, toString, valueOf

Methods declared in class Object

getClass, notify, notifyAll, wait, wait, wait

Enum Constant Details

CONTINUE

```
public static final FileVisitResult CONTINUE
```

Continue. When returned from a `preVisitDirectory` method then the entries in the directory should also be visited.

TERMINATE

```
public static final FileVisitResult TERMINATE
```

Terminate.

SKIP_SUBTREE

```
public static final FileVisitResult SKIP_SUBTREE
```

Continue without visiting the entries in this directory. This result is only meaningful when returned from the `preVisitDirectory` method; otherwise this result type is the same as returning `CONTINUE`.

SKIP_SIBLINGS

```
public static final FileVisitResult SKIP_SIBLINGS
```

Continue without visiting the *siblings* of this file or directory. If returned from the `preVisitDirectory` method then the entries in the directory are also skipped and the `postVisitDirectory` method is not invoked.

Method Details

values

`public static FileVisitResult[] values()`

Returns an array containing the constants of this enum class, in the order they are declared.

Returns:

an array containing the constants of this enum class, in the order they are declared

valueOf

`public static FileVisitResult valueOf(String name)`

Returns the enum constant of this class with the specified name. The string must match *exactly* an identifier used to declare an enum constant in this class. (Extraneous whitespace characters are not permitted.)

Parameters:

`name` - the name of the enum constant to be returned.

Returns:

the enum constant with the specified name

Throws:

`IllegalArgumentException` - if this enum class has no constant with the specified name

`NullPointerException` - if the argument is null
