Interface PathMatcher

Functional Interface:

This is a functional interface and can therefore be used as the assignment target for a lambda expression or method reference.

```
@FunctionalInterface
public interface PathMatcher
```

An interface that is implemented by objects that perform match operations on paths.

Since:

1.7

See Also:

`FileSystem.getPathMatcher(String)`, `Files.newDirectoryStream(Path,String)`

Method Summary

All Methods	Instance Methods	

Modifier and Type	Method	Description
`boolean`	`matches(Path path)`	Tells if given path matches this matcher's pattern.

Method Details

matches

```
boolean matches(Path path)
```

Tells if given path matches this matcher's pattern.

Parameters:

`path` - the path to match

Returns:

`true` if, and only if, the path matches this matcher's pattern
