Java SE 27 & JDK 27

Class StandardWatchEventKinds

java.lang.Object
    java.nio.file.StandardWatchEventKinds

```
public final class StandardWatchEventKinds
extends Object
```

Defines the *standard* event kinds.

Since:

1.7

Field Summary

Fields

Modifier and Type	Field	Description
static final WatchEvent.Kind<Path>	ENTRY_CREATE	Directory entry created.
static final WatchEvent.Kind<Path>	ENTRY_DELETE	Directory entry deleted.
static final WatchEvent.Kind<Path>	ENTRY_MODIFY	Directory entry modified.
static final WatchEvent.Kind<Object>	OVERFLOW	A special event to indicate that events may have been lost or discarded.

Method Summary

Methods declared in class Object

`clone`, `equals`, `finalize`, `getClass`, `hashCode`, `notify`, `notifyAll`, `toString`, `wait`, `wait`, `wait`

Field Details

OVERFLOW

`public static final WatchEvent.Kind<Object> OVERFLOW`

A special event to indicate that events may have been lost or discarded.

The `context` for this event is implementation specific and may be `null`. The event `count` may be greater than 1.

See Also:

`WatchService`

ENTRY_CREATE

`public static final WatchEvent.Kind<Path> ENTRY_CREATE`

Directory entry created.

When a directory is registered for this event then the `WatchKey` is queued when it is observed that an entry is created in the directory or renamed into the directory. The event `count` for this event is always 1.

ENTRY_DELETE

`public static final WatchEvent.Kind<Path> ENTRY_DELETE`

Directory entry deleted.

When a directory is registered for this event then the `WatchKey` is queued when it is observed that an entry is deleted or renamed out of the directory. The event `count` for this event is always 1.

ENTRY_MODIFY

`public static final WatchEvent.Kind<Path> ENTRY_MODIFY`

Directory entry modified.

When a directory is registered for this event then the `WatchKey` is queued when it is observed that an entry in the directory has been modified. The event `count` for this event is 1 or greater.
