# Interface PosixFileAttributes

**All Superinterfaces:**

BasicFileAttributes

---

```
public interface PosixFileAttributes
extends BasicFileAttributes
```

File attributes associated with files on file systems used by operating systems that implement the Portable Operating System Interface (POSIX) family of standards.

The POSIX attributes of a file are retrieved using a PosixFileAttributeView by invoking its readAttributes method.

**Since:**

1.7

## *Method Summary*

| All Methods | Instance Methods | |
|---|---|---|

| Modifier and Type | Method | Description |
|---|---|---|
| GroupPrincipal | **group**() | Returns the group owner of the file. |
| UserPrincipal | **owner**() | Returns the owner of the file. |
| Set <PosixFilePermission> | **permissions**() | Returns the permissions of the file. |

**Methods declared in interface BasicFileAttributes**

creationTime, fileKey, isDirectory, isOther, isRegularFile, isSymbolicLink, lastAccessTime, lastModifiedTime, size

## *Method Details*

### owner

UserPrincipal owner()

Returns the owner of the file.

**Returns:**

the file owner

**See Also:**

`FileOwnerAttributeView.setOwner(UserPrincipal)`

## group

`GroupPrincipal group()`

Returns the group owner of the file.

**Returns:**

the file group owner

**See Also:**

`PosixFileAttributeView.setGroup(GroupPrincipal)`

## permissions

`Set<PosixFilePermission> permissions()`

Returns the permissions of the file. The file permissions are returned as a set of `PosixFilePermission` elements. The returned set is a copy of the file permissions and is modifiable. This allows the result to be modified and passed to the `setPermissions` method to update the file's permissions.

**Returns:**

the file permissions

**See Also:**

`PosixFileAttributeView.setPermissions(Set)`
