Java SE 27 & JDK 27

Class IllegalFormatPrecisionException

java.lang.Object
  java.lang.Throwable
    java.lang.Exception
      java.lang.RuntimeException
        java.lang.IllegalArgumentException
          java.util.IllegalFormatException
            java.util.IllegalFormatPrecisionException

All Implemented Interfaces:

Serializable

```
public non-sealed class IllegalFormatPrecisionException
extends IllegalFormatException
```

Unchecked
exception thrown when the precision is a negative value other than `-1`, the conversion does not support a precision, or the value is otherwise unsupported. If the precision is not representable by an `int` type, then the value `Integer.MIN_VALUE` will be used in the exception.

Since:

1.5
