Java SE 27 & JDK 27

Class InvalidPropertiesFormatException

java.lang.Object
  java.lang.Throwable
    java.lang.Exception
      java.io.IOException
        java.util.InvalidPropertiesFormatException

All Implemented Interfaces:

Serializable

```
public class InvalidPropertiesFormatException
extends IOException
```

Thrown to indicate that an operation could not complete because the input did not conform to the appropriate XML document type for a collection of properties, as per the `Properties` specification.

Note, that although InvalidPropertiesFormatException inherits Serializable interface from Exception, it is not intended to be Serializable. Appropriate serialization methods are implemented to throw NotSerializableException.

Since:

1.5

Constructor Summary

Constructors

Constructor	Description
InvalidPropertiesFormatException(String message)	Constructs an InvalidPropertiesFormatException with the specified detail message.
InvalidPropertiesFormatException(Throwable cause)	Constructs an InvalidPropertiesFormatException with the specified cause.

Method Summary

Methods declared in class Throwable

addSuppressed, fillInStackTrace, getCause, getLocalizedMessage, getMessage, getStackTrace, getSuppressed, initCause,

printStackTrace, printStackTrace, printStackTrace, setStackTrace, toString

Methods declared in class Object

clone, equals, finalize, getClass, hashCode, notify, notifyAll, wait, wait, wait

Constructor Details

InvalidPropertiesFormatException

```
public InvalidPropertiesFormatException(Throwable cause)
```

Constructs an InvalidPropertiesFormatException with the specified cause.

Parameters:

cause - the cause (which is saved for later retrieval by the Throwable.getCause() method).

InvalidPropertiesFormatException

```
public InvalidPropertiesFormatException(String message)
```

Constructs an InvalidPropertiesFormatException with the specified detail message.

Parameters:

message - the detail message. The detail message is saved for later retrieval by the Throwable.getMessage() method.
