Java SE 27 & JDK 27

Interface Filter

Functional Interface:

This is a functional interface and can therefore be used as the assignment target for a lambda expression or method reference.

```
@FunctionalInterface
public interface Filter
```

A Filter can be used to provide fine grain control over what is logged, beyond the control provided by log levels.

Each Logger and each Handler can have a filter associated with it. The Logger or Handler will call the isLoggable method to check if a given LogRecord should be published. If isLoggable returns false, the LogRecord will be discarded.

Since:

1.4

Method Summary

All Methods	Instance Methods	

Modifier and Type	Method	Description
boolean	**isLoggable**(LogRecord record)	Check if a given log record should be published.

Method Details

isLoggable

```
boolean isLoggable(LogRecord record)
```

Check if a given log record should be published.

Parameters:

`record` - a LogRecord

Returns:

true if the log record should be published.
