Java SE 27 & JDK 27

Class LoggingPermission

java.lang.Object
  java.security.Permission
    java.security.BasicPermission
      java.util.logging.LoggingPermission

All Implemented Interfaces:

Serializable, Guard

```
@Deprecated(since="25",
            forRemoval=true)
public final class LoggingPermission
extends BasicPermission
```

Deprecated, for removal: This API element is subject to removal in a future version.
This permission cannot be used for controlling access to resources as the Security Manager is no longer supported.

This class is for logging permissions. Currently there is only one LoggingPermission named "control".

Since:

1.4

clone, finalize, getClass, notify, notifyAll, wait, wait, wait

Constructor Details

LoggingPermission

```
public LoggingPermission(String name,
                         String actions)
                  throws IllegalArgumentException
```

Deprecated, for removal: This API element is subject to removal in a future version.

Creates a new LoggingPermission object.

Parameters:

`name` - Permission name. Must be "control".

`actions` - Must be either null or the empty string.

Throws:

`NullPointerException` - if `name` is `null`.

`IllegalArgumentException` - if `name` is empty or if arguments are invalid.
