Java SE 27 & JDK 27

Interface PreferencesFactory

`public interface PreferencesFactory`

A factory object that generates Preferences objects. Providers of new `Preferences` implementations should provide corresponding `PreferencesFactory` implementations so that the new `Preferences` implementation can be installed in place of the platform-specific default implementation.

This class is for `Preferences` implementers only. Normal users of the `Preferences` facility should have no need to consult this documentation.

Since:

1.4

`Preferences`

Method Summary

All Methods | Instance Methods

Modifier and Type	Method	Description
`Preferences`	**`systemRoot`**`()`	Returns the system root preference node.
`Preferences`	**`userRoot`**`()`	Returns the user root preference node corresponding to the calling user.

Method Details

systemRoot

`Preferences systemRoot()`

Returns the system root preference node. (Multiple calls on this method will return the same object reference.)

Returns:

the system root preference node

userRoot

`Preferences userRoot()`

Returns the user root preference node corresponding to the calling user. In a server, the returned value will typically depend on some implicit client-context.

Returns:

the user root preference node corresponding to the calling user
