Java SE 27 & JDK 27

Class PatternSyntaxException

java.lang.Object
  java.lang.Throwable
    java.lang.Exception
      java.lang.RuntimeException
        java.lang.IllegalArgumentException
          java.util.regex.PatternSyntaxException

All Implemented Interfaces:

Serializable

```
public class PatternSyntaxException
extends IllegalArgumentException
```

Unchecked exception thrown to indicate a syntax error in a regular-expression pattern.

Since:

1.4

Constructor Summary

Constructors

Constructor	Description
PatternSyntaxException(String desc, String regex, int index)	Constructs a new instance of this class.

Method Summary

All Methods | **Instance Methods**

Modifier and Type	Method	Description
String	**getDescription**()	Retrieves the description of the error.
int	**getIndex**()	Retrieves the error index.
String	**getMessage**()	Returns a multi-line string containing the description of the syntax

		error and its index, the erroneous regular-expression pattern, and a visual indication of the error index within the pattern.
String	**getPattern**()	Retrieves the erroneous regular-expression pattern.

Methods declared in class Throwable

addSuppressed, fillInStackTrace, getCause, getLocalizedMessage, getStackTrace, getSuppressed, initCause, printStackTrace, printStackTrace, printStackTrace, setStackTrace, toString

Methods declared in class Object

clone, equals, finalize, getClass, hashCode, notify, notifyAll, wait, wait, wait

Constructor Details

PatternSyntaxException

```
public PatternSyntaxException(String desc,
                              String regex,
                              int index)
```

Constructs a new instance of this class.

Parameters:

`desc` - A description of the error

`regex` - The erroneous pattern

`index` - The approximate index in the pattern of the error, or `-1` if the index is not known

Method Details

getIndex

`public int getIndex()`

Retrieves the error index.

Returns:

The approximate index in the pattern of the error, or `-1` if the index is not known

getDescription

`public String getDescription()`

Retrieves the description of the error.

Returns:

The description of the error

getPattern

`public String getPattern()`

Retrieves the erroneous regular-expression pattern.

Returns:

The erroneous pattern

getMessage

`public String getMessage()`

Returns a multi-line string containing the description of the syntax error and its index, the erroneous regular-expression pattern, and a visual indication of the error index within the pattern.

Overrides:

`getMessage` in class `Throwable`

Returns:

The full detail message
