Interface ResourceBundleControlProvider

`public interface` **`ResourceBundleControlProvider`**

An interface for service providers that provide implementations of `ResourceBundle.Control`. The default resource bundle loading behavior of the `ResourceBundle.getBundle` factory methods that take no `ResourceBundle.Control` instance can be modified with `ResourceBundleControlProvider` implementations.

Provider implementations are loaded from the application's class path using `ServiceLoader` at the first invocation of the `ResourceBundle.getBundle` factory method that takes no `ResourceBundle.Control` instance.

All `ResourceBundleControlProviders` are ignored in named modules.

Since:

1.8

See Also:

`ResourceBundle.getBundle`, `ServiceLoader.load(Class)`

Method Summary

All Methods	Instance Methods	

Modifier and Type	Method	Description
`ResourceBundle.Contr`	**`getControl`**`(String baseName)`	Returns a `ResourceBundle.Control` instance that is used to handle resource bundle loading for the given `baseName`.

Method Details

getControl

`ResourceBundle.Control getControl(String baseName)`

Returns a `ResourceBundle.Control` instance that is used to handle resource bundle loading for the given `baseName`. This method must return `null` if the given `baseName` isn't handled by this provider.

Parameters:

`baseName` - the base name of the resource bundle

Returns:

a `ResourceBundle.Control` instance, or `null` if the given `baseName` is not applicable to this provider.

Throws:

`NullPointerException` - if `baseName` is `null`
