java.io

Interface FilenameFilter

Functional Interface:

This is a functional interface and can therefore be used as the assignment target for a lambda expression or method reference.

```
@FunctionalInterface
public interface FilenameFilter
```

Instances of classes that implement this interface are used to filter filenames. These instances are used to filter directory listings in the `list` method of class `File`, and by the Abstract Window Toolkit's file dialog component.

Since:

JDK1.0

See Also:

`FileDialog.setFilenameFilter(java.io.FilenameFilter)`, `File`, `File.list(java.io.FilenameFilter)`

Method Summary

Abstract Methods

Modifier and Type	Method	Description
boolean	**accept**(**File** dir, **String** name)	Tests if a specified file should be included in a file list.

Method Detail

accept

```
boolean accept(File dir,
               String name)
```

Tests if a specified file should be included in a file list.

Parameters:

`dir - the directory in which the file was found.`

`name - the name of the file.`

Returns:

`true if and only if the name should be included in the file list; false otherwise.`
