Class EnumConstantNotPresentException

java.lang.Object
  java.lang.Throwable
    java.lang.Exception
      java.lang.RuntimeException
        java.lang.EnumConstantNotPresentException

All Implemented Interfaces:

Serializable

```
public class EnumConstantNotPresentException
extends RuntimeException
```

Thrown when an application tries to access an enum constant by name and the enum type contains no constant with the specified name. This exception can be thrown by the API used to read annotations reflectively.

Since:

1.5

Constructor Detail

EnumConstantNotPresentException

```
public EnumConstantNotPresentException(Class<? extends Enum> enumType,
                                       String constantName)
```

Constructs an `EnumConstantNotPresentException` for the specified constant.

Parameters:

`enumType` - the type of the missing enum constant

`constantName` - the name of the missing enum constant

Method Detail

enumType

```
public Class<? extends Enum> enumType()
```

Returns the type of the missing enum constant.

Returns:

the type of the missing enum constant

constantName

```
public String constantName()
```

Returns the name of the missing enum constant.

Returns:

the name of the missing enum constant
