java.lang.annotation

Class IncompleteAnnotationException

java.lang.Object
  java.lang.Throwable
    java.lang.Exception
      java.lang.RuntimeException
        java.lang.annotation.IncompleteAnnotationException

All Implemented Interfaces:

Serializable

```
public class IncompleteAnnotationException
extends RuntimeException
```

Thrown to indicate that a program has attempted to access an element of an annotation type that was added to the annotation type definition after the annotation was compiled (or serialized). This exception will not be thrown if the new element has a default value. This exception can be thrown by the API used to read annotations reflectively.

Since:

1.5

AnnotatedElement, Serialized Form

Constructor Summary

Constructors

Constructor
`IncompleteAnnotationException(Class<? extends Annotation> annotationType, String`

Method Summary

Concrete Methods

Modifier and Type	Method	Description
`Class<? extends Annotation>`	`annotationType()`	Returns the Class object for the annotation type with the missing element.
`String`	`elementName()`	Returns the name of the missing element.

Methods inherited from class java.lang.Throwable

addSuppressed, fillInStackTrace, getCause, getLocalizedMessage, getMessage, getStackTrace, getSuppressed, initCause, printStackTrace, printStackTrace, printStackTrace, setStackTrace, toString

Methods inherited from class java.lang.Object

clone, equals, finalize, getClass, hashCode, notify, notifyAll, wait, wait, wait

Constructor Detail

IncompleteAnnotationException

```
public IncompleteAnnotationException(Class<? extends Annotation> annotationType,
                                     String elementName)
```

Constructs an IncompleteAnnotationException to indicate that the named element was missing from the specified annotation type.

Parameters:

`annotationType` - the Class object for the annotation type

`elementName` - the name of the missing element

Throws:

NullPointerException - if either parameter is null

Method Detail

annotationType

```
public Class<? extends Annotation> annotationType()
```

Returns the Class object for the annotation type with the missing element.

Returns:

the Class object for the annotation type with the missing element

elementName

```
public String elementName()
```

Returns the name of the missing element.

Returns:

the name of the missing element
