java.lang.instrument

Class ClassDefinition

java.lang.Object
    java.lang.instrument.ClassDefinition

```
public final class ClassDefinition
extends Object
```

This class serves as a parameter block to the `Instrumentation.redefineClasses` method. Serves to bind the `Class` that needs redefining together with the new class file bytes.

Since:

1.5

See Also:

`Instrumentation.redefineClasses(java.lang.instrument.ClassDefinition...)`

Constructor Summary

Constructors

Constructor	Description
`ClassDefinition(Class<?> theClass, byte[] theClassFile)`	Creates a new `ClassDefinition` binding using the supplied class and class file bytes.

Method Summary

Concrete Methods

Modifier and Type	Method	Description
`Class<?>`	**`getDefinitionClass()`**	Returns the class.
`byte[]`	**`getDefinitionClassFile()`**	Returns the array of bytes that contains the new class file.

Methods inherited from class java.lang.Object

`clone`, `equals`, `finalize`, `getClass`, `hashCode`, `notify`, `notifyAll`, `toString`, `wait`, `wait`, `wait`

Constructor Detail

ClassDefinition

```
public ClassDefinition(Class<?> theClass,
                       byte[] theClassFile)
```

Creates a new `ClassDefinition` binding using the supplied class and class file bytes. Does not copy the supplied buffer, just captures a reference to it.

Parameters:

`theClass` - the Class that needs redefining

`theClassFile` - the new class file bytes

Throws:

`NullPointerException` - if the supplied class or array is null.

Method Detail

getDefinitionClass

```
public Class<?> getDefinitionClass()
```

Returns the class.

Returns:

`the Class object referred to.`

getDefinitionClassFile

```
public byte[] getDefinitionClassFile()
```

Returns the array of bytes that contains the new class file.

Returns:

`the class file bytes.`
