java.lang.reflect

Class InvocationTargetException

java.lang.Object
  java.lang.Throwable
    java.lang.Exception
      java.lang.ReflectiveOperationException
        java.lang.reflect.InvocationTargetException

All Implemented Interfaces:

Serializable

```
public class InvocationTargetException
extends ReflectiveOperationException
```

InvocationTargetException is a checked exception that wraps an exception thrown by an invoked method or constructor.

As of release 1.4, this exception has been retrofitted to conform to the general purpose exception-chaining mechanism. The "target exception" that is provided at construction time and accessed via the `getTargetException()` method is now known as the *cause*, and may be accessed via the `Throwable.getCause()` method, as well as the aforementioned "legacy method."

Constructor Summary

Constructors

Modifier	Constructor	Description
protected	**InvocationTargetException**()	Constructs an InvocationTargetExceptio

		with `null` as the target exception.
	InvocationTargetException(**Throwable** target)	Constructs a InvocationTargetException with a target exception.
	InvocationTargetException(**Throwable** target, **String** s)	Constructs a InvocationTargetException with a target exception and a detail message.

Method Summary

Concrete Methods

Modifier and Type	Method	Description
Throwable	**getCause**()	Returns the cause of this exception (the thrown target exception, which may be `null`).
Throwable	**getTargetException**()	Get the thrown target exception.

Methods inherited from class java.lang.Throwable

addSuppressed, fillInStackTrace, getLocalizedMessage, getMessage, getStackTrace, getSuppressed, initCause, printStackTrace, printStackTrace, printStackTrace, setStackTrace, toString

Methods inherited from class java.lang.Object

clone, equals, finalize, getClass, hashCode, notify, notifyAll, wait, wait, wait

Constructor Detail

InvocationTargetException

```
protected InvocationTargetException()
```

Constructs an `InvocationTargetException` with `null` as the target exception.

InvocationTargetException

```
public InvocationTargetException(Throwable target)
```

Constructs a InvocationTargetException with a target exception.

Parameters:

`target - the target exception`

InvocationTargetException

```
public InvocationTargetException(Throwable target,
                                 String s)
```

Constructs a InvocationTargetException with a target exception and a detail message.

Parameters:

`target - the target exception`

`s - the detail message`

Method Detail

getTargetException

```
public Throwable getTargetException()
```

Get the thrown target exception.

This method predates the general-purpose exception chaining facility. The `Throwable.getCause()` method is now the preferred means of obtaining this information.

Returns:

`the thrown target exception (cause of this exception).`

getCause

```
public Throwable getCause()
```

Returns the cause of this exception (the thrown target exception, which may be `null`).

Overrides:

`getCause` in class `Throwable`

Returns:

the cause of this exception.

Since:

1.4
