java.nio.channels.spi

Class AbstractSelectionKey

java.lang.Object
    java.nio.channels.SelectionKey
        java.nio.channels.spi.AbstractSelectionKey

```
public abstract class AbstractSelectionKey
extends SelectionKey
```

Base implementation class for selection keys.

This class tracks the validity of the key and implements cancellation.

Since:

1.4

Field Summary

Fields inherited from class java.nio.channels.SelectionKey

`OP_ACCEPT`, `OP_CONNECT`, `OP_READ`, `OP_WRITE`

Constructor Summary

Constructors

Modifier	Constructor	Description
protected	**AbstractSelectionKey**()	Initializes a new instance of this class.

Method Summary

Concrete Methods		
Modifier and Type	**Method**	**Description**
void	**cancel**()	Cancels this key.
boolean	**isValid**()	Tells whether or not this key is valid.

Methods inherited from class java.nio.channels.SelectionKey

attach, attachment, channel, interestOps, interestOps, isAcceptable, isConnectable, isReadable, isWritable, readyOps, selector

Methods inherited from class java.lang.Object

clone, equals, finalize, getClass, hashCode, notify, notifyAll, toString, wait, wait, wait

Constructor Detail

AbstractSelectionKey

```
protected AbstractSelectionKey()
```

Initializes a new instance of this class.

Method Detail

isValid

```
public final boolean isValid()
```

Description copied from class: SelectionKey
Tells whether or not this key is valid.

A key is valid upon creation and remains so until it is cancelled, its channel is closed, or its selector is closed.

Specified by:

isValid in class SelectionKey

Returns:

`true if, and only if, this key is valid`

cancel

```
public final void cancel()
```

Cancels this key.

If this key has not yet been cancelled then it is added to its selector's cancelled-key set while synchronized on that set.

Specified by:

`cancel` in class `SelectionKey`
