java.nio.file

Interface DirectoryStream.Filter<T>

Type Parameters:

`T - the type of the directory entry`

Enclosing interface:

`DirectoryStream<T>`

Functional Interface:

`This is a functional interface and can therefore be used as the assignment target for a lambda expression or method reference.`

```
@FunctionalInterface
public static interface DirectoryStream.Filter<T>
```

An interface that is implemented by objects that decide if a directory entry should be accepted or filtered. A `Filter` is passed as the parameter to the `Files.newDirectoryStream(Path,DirectoryStream.Filter)` method when opening a directory to iterate over the entries in the directory.

Since:

`1.7`

Method Summary

Abstract Methods

Modifier and Type	Method	Description
boolean	**accept**(T entry)	Decides if the given directory entry should be accepted or filtered.

Method Detail

accept

```
boolean accept(T entry)
        throws IOException
```

Decides if the given directory entry should be accepted or filtered.

Parameters:

`entry - the directory entry to be tested`

Returns:

`true if the directory entry should be accepted`

Throws:

`IOException - If an I/O error occurs`
