java.nio.file

Class SimpleFileVisitor<T>

java.lang.Object
    java.nio.file.SimpleFileVisitor<T>

Type Parameters:

`T - The type of reference to the files`

All Implemented Interfaces:

`FileVisitor<T>`

```
public class SimpleFileVisitor<T>
extends Object
implements FileVisitor<T>
```

A simple visitor of files with default behavior to visit all files and to re-throw I/O errors.

Methods in this class may be overridden subject to their general contract.

Since:

`1.7`

Constructor Summary

Constructors

Modifier	Constructor	Description
protected	`SimpleFileVisitor()`	Initializes a new instance of this class.

Method Summary

Concrete Methods

Modifier and Type	Method	Description
FileVisitResult	postVisitDirectory(T dir, IOException exc)	Invoked for a directory after entries in the directory, and all of their descendants, have been visited.
FileVisitResult	preVisitDirectory(T dir, BasicFileAttributes attrs)	Invoked for a directory before entries in the directory are visited.
FileVisitResult	visitFile(T file, BasicFileAttributes attrs)	Invoked for a file in a directory.
FileVisitResult	visitFileFailed(T file, IOException exc)	Invoked for a file that could not be visited.

Constructor Detail

SimpleFileVisitor

```
protected SimpleFileVisitor()
```

Initializes a new instance of this class.

Method Detail

preVisitDirectory

```
public FileVisitResult preVisitDirectory(T dir,
                                         BasicFileAttributes attrs)
                                  throws IOException
```

Invoked for a directory before entries in the directory are visited.

Unless overridden, this method returns CONTINUE.

Specified by:

preVisitDirectory in interface FileVisitor<T>

Parameters:

dir - a reference to the directory

attrs - the directory's basic attributes

Returns:

the visit result

Throws:

IOException - if an I/O error occurs

visitFile

```
public FileVisitResult visitFile(T file,
                                 BasicFileAttributes attrs)
                          throws IOException
```

Invoked for a file in a directory.

Unless overridden, this method returns CONTINUE.

Specified by:

visitFile in interface FileVisitor<T>

Parameters:

file - a reference to the file

attrs - the file's basic attributes

Returns:

the visit result

Throws:

IOException - if an I/O error occurs

visitFileFailed

```
public FileVisitResult visitFileFailed(T file,
                                       IOException exc)
                                throws IOException
```

Invoked for a file that could not be visited.

Unless overridden, this method re-throws the I/O exception that prevented the file from being visited.

Specified by:

`visitFileFailed` in interface `FileVisitor<T>`

Parameters:

`file` - a reference to the file

`exc` - the I/O exception that prevented the file from being visited

Returns:

the visit result

Throws:

`IOException` - if an I/O error occurs

postVisitDirectory

```
public FileVisitResult postVisitDirectory(T dir,
                                          IOException exc)
                                   throws IOException
```

Invoked for a directory after entries in the directory, and all of their descendants, have been visited.

Unless overridden, this method returns `CONTINUE` if the directory iteration completes without an I/O exception; otherwise this method re-throws the I/O exception that caused the iteration of the directory to terminate prematurely.

Specified by:

`postVisitDirectory` in interface `FileVisitor<T>`

Parameters:

`dir` - a reference to the directory

`exc` - null if the iteration of the directory completes without an error; otherwise the I/O exception that caused the iteration of the directory to complete prematurely

Returns:

the visit result

Throws:

```
IOException - if an I/O error occurs
```
