java.nio.file.attribute

Enum AclEntryFlag

java.lang.Object
    java.lang.Enum<AclEntryFlag>
        java.nio.file.attribute.AclEntryFlag

All Implemented Interfaces:

Serializable, Comparable<AclEntryFlag>

```
public enum AclEntryFlag
extends Enum<AclEntryFlag>
```

Defines the flags for used by the flags component of an ACL `entry`.

In this release, this class does not define flags related to `AclEntryType.AUDIT` and `AclEntryType.ALARM` entry types.

Since:

1.7

Enum Constant Summary

Enum Constants

Enum Constant	Description
DIRECTORY_INHERIT	Can be placed on a directory and indicates that the ACL entry should be added to each new directory created.
FILE_INHERIT	Can be placed on a directory and indicates that the ACL entry should be added to each new non-directory file created.
INHERIT_ONLY	

	Can be placed on a directory but does not apply to the directory, only to newly created files/ directories as specified by the **FILE_INHERIT** and **DIRECTORY_INHERIT** flags.
NO_PROPAGATE_INHERIT	Can be placed on a directory to indicate that the ACL entry should not be placed on the newly created directory which is inheritable by subdirectories of the created directory.

Method Summary

Concrete Methods

Modifier and Type	Method	Description
static **AclEntryFlag**	**valueOf**(**String** name)	Returns the enum constant of this type with the specified name.
static **AclEntryFlag**[]	**values**()	Returns an array containing the constants of this enum type, in the order they are declared.

Methods inherited from class java.lang.Enum

clone, compareTo, equals, finalize, getDeclaringClass, hashCode, name, ordinal, toString, valueOf

Methods inherited from class java.lang.Object

getClass, notify, notifyAll, wait, wait, wait

Enum Constant Detail

FILE_INHERIT

```
public static final AclEntryFlag FILE_INHERIT
```

Can be placed on a directory and indicates that the ACL entry should be added to each new non-directory file created.

DIRECTORY_INHERIT

```
public static final AclEntryFlag DIRECTORY_INHERIT
```

Can be placed on a directory and indicates that the ACL entry should be added to each new directory created.

NO_PROPAGATE_INHERIT

```
public static final AclEntryFlag NO_PROPAGATE_INHERIT
```

Can be placed on a directory to indicate that the ACL entry should not be placed on the newly created directory which is inheritable by subdirectories of the created directory.

INHERIT_ONLY

```
public static final AclEntryFlag INHERIT_ONLY
```

Can be placed on a directory but does not apply to the directory, only to newly created files/directories as specified by the `FILE_INHERIT` and `DIRECTORY_INHERIT` flags.

Method Detail

values

```
public static AclEntryFlag[] values()
```

Returns an array containing the constants of this enum type, in the order they are declared. This method may be used to iterate over the constants as follows:

```
for (AclEntryFlag c : AclEntryFlag.values())
    System.out.println(c);
```

Returns:

an array containing the constants of this enum type, in the order they are declared

valueOf

```
public static AclEntryFlag valueOf(String name)
```

Returns the enum constant of this type with the specified name. The string must match *exactly* an identifier used to declare an enum constant in this type. (Extraneous whitespace characters are not permitted.)

Parameters:

`name - the name of the enum constant to be returned.`

Returns:

`the enum constant with the specified name`

Throws:

`IllegalArgumentException - if this enum type has no constant with the specified name`

`NullPointerException - if the argument is null`
