java.nio.file.attribute

Interface PosixFileAttributes

All Superinterfaces:

BasicFileAttributes

```
public interface PosixFileAttributes
extends BasicFileAttributes
```

File attributes associated with files on file systems used by operating systems that implement the Portable Operating System Interface (POSIX) family of standards.

The POSIX attributes of a file are retrieved using a `PosixFileAttributeView` by invoking its `readAttributes` method.

Since:

1.7

Method Summary

Abstract Methods

Modifier and Type	Method	Description
`GroupPrincipal`	`group()`	Returns the group owner of the file.
`UserPrincipal`	`owner()`	Returns the owner of the file.
`Set<PosixFilePermission>`	`permissions()`	Returns the permissions of the file.

Methods inherited from interface java.nio.file.attribute.BasicFileAttributes

creationTime, fileKey, isDirectory, isOther, isRegularFile, isSymbolicLink, lastAccessTime, lastModifiedTime, size

Method Detail

owner

UserPrincipal owner()

Returns the owner of the file.

Returns:

the file owner

See Also:

FileOwnerAttributeView.setOwner(java.nio.file.attribute.UserPrincipal)

group

GroupPrincipal group()

Returns the group owner of the file.

Returns:

the file group owner

See Also:

PosixFileAttributeView.setGroup(java.nio.file.attribute.GroupPrincipal)

permissions

`Set<PosixFilePermission> permissions()`

Returns the permissions of the file. The file permissions are returned as a set of `PosixFilePermission` elements. The returned set is a copy of the file permissions and is modifiable. This allows the result to be modified and passed to the `setPermissions` method to update the file's permissions.

Returns:

`the file permissions`

See Also:

`PosixFileAttributeView.setPermissions(java.util.Set<java.nio.file.attribute.Posix`
