java.text

Class ParseException

java.lang.Object
    java.lang.Throwable
        java.lang.Exception
            java.text.ParseException

All Implemented Interfaces:

Serializable

```
public class ParseException
extends Exception
```

Signals that an error has been reached unexpectedly while parsing.

See Also:

Exception, Format, FieldPosition, Serialized Form

Constructor Summary

Constructors

Constructor	Description
`ParseException(String s, int errorOffset)`	Constructs a ParseException with the specified detail message and offset.

Method Summary

Concrete Methods

Modifier and Type	Method	Description
int	getErrorOffset()	Returns the position where the error was found.

Methods inherited from class java.lang.Throwable

Methods inherited from class java.lang.Object

clone, equals, finalize, getClass, hashCode, notify, notifyAll, wait, wait, wait

Constructor Detail

ParseException

```
public ParseException(String s,
                      int errorOffset)
```

Constructs a ParseException with the specified detail message and offset. A detail message is a String that describes this particular exception.

Parameters:

`s - the detail message`

`errorOffset - the position where the error is found while parsing.`

Method Detail

getErrorOffset

```
public int getErrorOffset()
```

Returns the position where the error was found.

Returns:

```
the position where the error was found
```
