Interface Observer

`public interface Observer`

A class can implement the `Observer` interface when it wants to be informed of changes in observable objects.

Since:

`JDK1.0`

See Also:

`Observable`

Method Summary

Abstract Methods

Modifier and Type	Method	Description
`void`	`update(Observable o, Object arg)`	This method is called whenever the observed object is changed.

Method Detail

update

```
void update(Observable o,
            Object arg)
```

This method is called whenever the observed object is changed. An application calls an `Observable` object's `notifyObservers` method to have all the object's observers notified of the change.

Parameters:

`o - the observable object.`

`arg - an argument passed to the notifyObservers method.`
