java.util.concurrent

Interface Callable<V>

Type Parameters:

`V - the result type of method call`

All Known Subinterfaces:

`DocumentationTool.DocumentationTask, JavaCompiler.CompilationTask`

Functional Interface:

`This is a functional interface and can therefore be used as the assignment target for a lambda expression or method reference.`

```
@FunctionalInterface
public interface Callable<V>
```

A task that returns a result and may throw an exception. Implementors define a single method with no arguments called `call`.

The `Callable` interface is similar to `Runnable`, in that both are designed for classes whose instances are potentially executed by another thread. A `Runnable`, however, does not return a result and cannot throw a checked exception.

The `Executors` class contains utility methods to convert from other common forms to `Callable` classes.

Since:

`1.5`

See Also:

`Executor`

Method Summary

Abstract Methods		
Modifier and Type	**Method**	**Description**
V	call()	Computes a result, or throws an exception if unable to do so.

Method Detail

call

```
V call()
throws Exception
```

Computes a result, or throws an exception if unable to do so.

Returns:

computed result

Throws:

Exception - if unable to compute a result
