java.util.function

Interface DoubleBinaryOperator

Functional Interface:

This is a functional interface and can therefore be used as the assignment target for a lambda expression or method reference.

```
@FunctionalInterface
public interface DoubleBinaryOperator
```

Represents an operation upon two `double`-valued operands and producing a `double`-valued result. This is the primitive type specialization of `BinaryOperator` for `double`.

This is a functional interface whose functional method is `applyAsDouble(double, double)`.

Since:

1.8

See Also:

`BinaryOperator`, `DoubleUnaryOperator`

Method Summary

Abstract Methods

Modifier and Type	Method	Description
double	**applyAsDouble**(double left, double right)	Applies this operator to the given operands.

Method Detail

applyAsDouble

```
double applyAsDouble(double left,
                     double right)
```

Applies this operator to the given operands.

Parameters:

`left - the first operand`

`right - the second operand`

Returns:

`the operator result`
