java.util.function

Interface DoubleConsumer

All Known Subinterfaces:

`DoubleStream.Builder`

All Known Implementing Classes:

`DoubleSummaryStatistics`

Functional Interface:

This is a functional interface and can therefore be used as the assignment target for a lambda expression or method reference.

```
@FunctionalInterface
public interface DoubleConsumer
```

Represents an operation that accepts a single `double`-valued argument and returns no result. This is the primitive type specialization of `Consumer` for `double`. Unlike most other functional interfaces, `DoubleConsumer` is expected to operate via side-effects.

This is a functional interface whose functional method is `accept(double)`.

Since:

1.8

See Also:

`Consumer`

Method Summary

Default Methods		Abstract Methods
Modifier and Type	**Method**	**Description**

void	**accept**(double value)	Performs this operation on the given argument.
default **DoubleConsumer**	**andThen**(**DoubleConsumer** after)	Returns a composed DoubleConsumer that performs, in sequence, this operation followed by the after operation.

Method Detail

accept

```
void accept(double value)
```

Performs this operation on the given argument.

Parameters:

value - the input argument

andThen

```
default DoubleConsumer andThen(DoubleConsumer after)
```

Returns a composed DoubleConsumer that performs, in sequence, this operation followed by the after operation. If performing either operation throws an exception, it is relayed to the caller of the composed operation. If performing this operation throws an exception, the after operation will not be performed.

Parameters:

after - the operation to perform after this operation

Returns:

a composed DoubleConsumer that performs in sequence this operation followed by the after operation

Throws:

NullPointerException - if after is null
