java.util.function

Interface ToDoubleBiFunction<T,U>

Type Parameters:

`T - the type of the first argument to the function`

`U - the type of the second argument to the function`

Functional Interface:

`This is a functional interface and can therefore be used as the assignment target for a lambda expression or method reference.`

```
@FunctionalInterface
public interface ToDoubleBiFunction<T,U>
```

Represents a function that accepts two arguments and produces a double-valued result. This is the `double`-producing primitive specialization for `BiFunction`.

This is a functional interface whose functional method is `applyAsDouble(Object, Object)`.

Since:

`1.8`

See Also:

`BiFunction`

Method Summary

Abstract Methods

Modifier and Type	Method	Description
`double`		

	applyAsDouble(T t, U u)	Applies this function to the given arguments.

Method Detail

applyAsDouble

```
double applyAsDouble(T t,
                     U u)
```

Applies this function to the given arguments.

Parameters:

`t - the first function argument`

`u - the second function argument`

Returns:

`the function result`
