java.util.function

Interface ToIntBiFunction<T,U>

Type Parameters:

`T - the type of the first argument to the function`

`U - the type of the second argument to the function`

Functional Interface:

`This is a functional interface and can therefore be used as the assignment target for a lambda expression or method reference.`

```
@FunctionalInterface
public interface ToIntBiFunction<T,U>
```

Represents a function that accepts two arguments and produces an int-valued result. This is the `int`-producing primitive specialization for `BiFunction`.

This is a functional interface whose functional method is `applyAsInt(Object, Object)`.

Since:

`1.8`

See Also:

`BiFunction`

Method Summary

	Abstract Methods	
Modifier and Type	**Method**	**Description**
`int`		

	applyAsInt(**T** t, **U** u)	Applies this function to the given arguments.

Method Detail

applyAsInt

```
int applyAsInt(T t,
               U u)
```

Applies this function to the given arguments.

Parameters:

`t - the first function argument`

`u - the second function argument`

Returns:

`the function result`
