java.util.prefs

Class NodeChangeEvent

java.lang.Object
    java.util.EventObject
        java.util.prefs.NodeChangeEvent

All Implemented Interfaces:

Serializable

```
public class NodeChangeEvent
extends EventObject
```

An event emitted by a `Preferences` node to indicate that a child of that node has been added or removed.

Note, that although NodeChangeEvent inherits Serializable interface from java.util.EventObject, it is not intended to be Serializable. Appropriate serialization methods are implemented to throw NotSerializableException.

Since:

1.4

See Also:

Preferences, NodeChangeListener, PreferenceChangeEvent
