java.util.stream

Interface LongStream.Builder

All Superinterfaces:

`LongConsumer`

Enclosing interface:

`LongStream`

```
public static interface LongStream.Builder
extends LongConsumer
```

A mutable builder for a `LongStream`.

A stream builder has a lifecycle, which starts in a building phase, during which elements can be added, and then transitions to a built phase, after which elements may not be added. The built phase begins begins when the `build()` method is called, which creates an ordered stream whose elements are the elements that were added to the stream builder, in the order they were added.

Since:

1.8

See Also:

`LongStream.builder()`

Method Summary

Abstract Methods | **Default Methods**

Modifier and Type	Method	Description

void	**accept**(long t)	Adds an element to the stream being built.
default **LongStream.Builder**	**add**(long t)	Adds an element to the stream being built.
LongStream	**build**()	Builds the stream, transitioning this builder to the built state.

Methods inherited from interface java.util.function.LongConsumer

andThen

Method Detail

accept

```
void accept(long t)
```

Adds an element to the stream being built.

Specified by:

accept in interface LongConsumer

Parameters:

t - the input argument

Throws:

IllegalStateException - if the builder has already transitioned to the built state

add

```
default LongStream.Builder add(long t)
```

Adds an element to the stream being built.

Implementation Requirements:

The default implementation behaves as if:

```
    accept(t)
```

```
    return this;
```

Parameters:

`t - the element to add`

Returns:

`this builder`

Throws:

`IllegalStateException - if the builder has already transitioned to the built state`

build

`LongStream build()`

Builds the stream, transitioning this builder to the built state. An `IllegalStateException` is thrown if there are further attempts to operate on the builder after it has entered the built state.

Returns:

`the built stream`

Throws:

`IllegalStateException - if the builder has already transitioned to the built state`
