java.util.zip

Class GZIPInputStream

java.lang.Object
  java.io.InputStream
    java.io.FilterInputStream
      java.util.zip.InflaterInputStream
        java.util.zip.GZIPInputStream

All Implemented Interfaces:

`Closeable, AutoCloseable`

```
public class GZIPInputStream
extends InflaterInputStream
```

This class implements a stream filter for reading compressed data in the GZIP file format.

See Also:

`InflaterInputStream`

Field Summary

Fields

Modifier and Type	Field	Description
protected CRC32	crc	CRC-32 for uncompressed data.
protected boolean	eos	Indicates end of input stream.
static int	GZIP_MAGIC	GZIP header magic number.

Fields inherited from class java.util.zip.InflaterInputStream

buf, inf, len

Fields inherited from class java.io.FilterInputStream

in

Constructor Summary

Constructors

Constructor	Description
GZIPInputStream(InputStream in)	Creates a new input stream with a default buffer size.
GZIPInputStream(InputStream in, int size)	Creates a new input stream with the specified buffer size.

Method Summary

Concrete Methods

Modifier and Type	Method	Description
void	close()	Closes this input stream and releases any system resources associated with the stream.
int	read(byte[] buf, int off, int len)	Reads uncompressed data into an array of bytes.

Methods inherited from class java.util.zip.InflaterInputStream

available, fill, mark, markSupported, read, reset, skip

Methods inherited from class java.io.FilterInputStream

read

Methods inherited from class java.lang.Object

clone, equals, finalize, getClass, hashCode, notify, notifyAll, toString, wait, wait, wait

Field Detail

crc

```
protected CRC32 crc
```

CRC-32 for uncompressed data.

eos

```
protected boolean eos
```

Indicates end of input stream.

GZIP_MAGIC

```
public static final int GZIP_MAGIC
```

GZIP header magic number.

Constant Field Values

Constructor Detail

GZIPInputStream

```
public GZIPInputStream(InputStream in,
                       int size)
                throws IOException
```

Creates a new input stream with the specified buffer size.

Parameters:

in - the input stream

size - the input buffer size

Throws:

ZipException - if a GZIP format error has occurred or the compression method used is unsupported

IOException - if an I/O error has occurred

IllegalArgumentException - if size <= 0

GZIPInputStream

```
public GZIPInputStream(InputStream in)
                throws IOException
```

Creates a new input stream with a default buffer size.

Parameters:

in - the input stream

Throws:

ZipException - if a GZIP format error has occurred or the compression method used is unsupported

IOException - if an I/O error has occurred

Method Detail

read

```
public int read(byte[] buf,
                int off,
                int len)
         throws IOException
```

Reads uncompressed data into an array of bytes. If `len` is not zero, the method will block until some input can be decompressed; otherwise, no bytes are read and `0` is returned.

Overrides:

read in class InflaterInputStream

Parameters:

buf - the buffer into which the data is read

off - the start offset in the destination array b

len - the maximum number of bytes read

Returns:

the actual number of bytes read, or -1 if the end of the compressed input stream is reached

Throws:

`NullPointerException` - If buf is null.

`IndexOutOfBoundsException` - If off is negative, len is negative, or len is greater than buf.length - off

`ZipException` - if the compressed input data is corrupt.

`IOException` - if an I/O error has occurred.

See Also:

`FilterInputStream.in`

close

```
public void close()
           throws IOException
```

Closes this input stream and releases any system resources associated with the stream.

Specified by:

`close` in interface `Closeable`

Specified by:

`close` in interface `AutoCloseable`

Overrides:

`close` in class `InflaterInputStream`

Throws:

`IOException` - if an I/O error has occurred

See Also:

`FilterInputStream.in`
