java.lang

Class IllegalArgumentException

java.lang.Object
  java.lang.Throwable
    java.lang.Exception
      java.lang.RuntimeException
        java.lang.IllegalArgumentException

All Implemented Interfaces:

Serializable

Direct Known Subclasses:

IllegalChannelGroupException, IllegalCharsetNameException, IllegalFormatException, IllegalSelectorException, IllegalThreadStateException, InvalidKeyException, InvalidOpenTypeException, InvalidParameterException, InvalidPathException, KeyAlreadyExistsException, NumberFormatException, PatternSyntaxException, ProviderMismatchException, UnresolvedAddressException, UnsupportedAddressTypeException, UnsupportedCharsetException

---

```
public class IllegalArgumentException
extends RuntimeException
```

Thrown to indicate that a method has been passed an illegal or inappropriate argument.

Since:

JDK1.0

Constructor Summary

Constructors

Constructor	Description
`IllegalArgumentException()`	Constructs an `IllegalArgumentExcepti` with no detail message.
`IllegalArgumentException(String s)`	Constructs an `IllegalArgumentExcepti` with the specified detail message.
`IllegalArgumentException(String message, Throwable cause)`	Constructs a new exceptio with the specified detail message and cause.
`IllegalArgumentException(Throwable cause)`	Constructs a new exceptio with the specified cause a a detail message of `(cause==null ? null : cause.toString())` (whic typically contains the clas and detail message of `cause`).

Method Summary

Methods inherited from class java.lang.Throwable

`addSuppressed`, `fillInStackTrace`, `getCause`, `getLocalizedMessage`, `getMessage`, `getStackTrace`, `getSuppressed`, `initCause`, `printStackTrace`, `printStackTrace`, `printStackTrace`, `setStackTrace`, `toString`

Methods inherited from class java.lang.Object

`clone`, `equals`, `finalize`, `getClass`, `hashCode`, `notify`, `notifyAll`, `wait`, `wait`, `wait`

Constructor Detail

IllegalArgumentException

```
public IllegalArgumentException()
```

Constructs an `IllegalArgumentException` with no detail message.

IllegalArgumentException

```
public IllegalArgumentException(String s)
```

Constructs an `IllegalArgumentException` with the specified detail message.

Parameters:

`s - the detail message.`

IllegalArgumentException

```
public IllegalArgumentException(String message,
                                Throwable cause)
```

Constructs a new exception with the specified detail message and cause.

Note that the detail message associated with `cause` is *not* automatically incorporated in this exception's detail message.

Parameters:

`message - the detail message (which is saved for later retrieval by the Throwable.getMessage() method).`

`cause - the cause (which is saved for later retrieval by the Throwable.getCause() method). (A null value is permitted, and indicates that the cause is nonexistent or unknown.)`

Since:

`1.5`

IllegalArgumentException

```
public IllegalArgumentException(Throwable cause)
```

Constructs a new exception with the specified cause and a detail message of `(cause==null ? null : cause.toString())` (which typically contains the class and detail message of `cause`). This constructor is useful for exceptions that are little more than wrappers for other throwables (for example, `PrivilegedActionException`).

Parameters:

`cause` - the cause (which is saved for later retrieval by the `Throwable.getCause()` method). (A null value is permitted, and indicates that the cause is nonexistent or unknown.)

Since:

1.5
